CD ROM Floppy Disk *(please tick one)*

SIGNATURE: _____ DATE: _____

Health Practitioner Reminder Service: Pap Data Request

Instructions for obtaining WinZip Software for decrypting* and using Pap data provided by the NSW Pap Test Register:

1. Go to <http://www.winzip.com>
2. Click on the “Downloads” button.
3. Click on the latest WinZip version link. E.g. WinZip 12.0 (note: WinZip version subject to change)
4. Select a Download Location (can leave as the default).
5. Click on the “Download Evaluation” button.
6. Click on the “Download Now” link.

If you are still experiencing problems with obtaining the WinZip software, please consult with your designated IT support.

*** In compliance with Cancer Institute NSW data security policies the minimal encryption of 256-Bit AES encryption or equivalent are required. (WinZip supports AES encryption in two different strengths: 128-bit AES and 256-bit AES. 256-bit AES is stronger than 128-bit AES, but both of them can provide significantly greater security than the standard Zip 2.0 method).**
