

Women's cancer screening checklist

Your name:

Age:

Cervical Screening

- The Cervical Screening Test finds the infection that causes cervical cancer. This infection is called human papillomavirus.
- The Cervical Screening Test is quick and simple. If you have had a Pap test, the way the test is done will feel the same.
- If you're aged between 25 and 74 and have ever been sexually active, you need to have a Cervical Screening Test every 5 years.

Cervical screening checklist

Yes No Unsure

I have done a cervical cancer screening test in the past

If yes, my last cervical cancer screening test was in: (year)

Was the result normal?

Breast Screening

- Screening for breast cancer begins at age 50 for most people.
- Finding breast cancer when it is small makes treatment easier and improves survival rates.
- BreastScreen NSW recommends women have their free breast x-ray (mammogram) every 2 years from age 50-74.
- Mammograms can find cancers the size of a grain of rice, long before they can be seen or felt.

Breast screening checklist

Yes No Unsure

I have had a mammogram in the past

If yes, my last mammogram was in: (year)

Was the result normal?

Has someone in your family had breast cancer?

Bowel Screening

- Screening for bowel cancer begins at age 50 for most people.
- If bowel cancer is found early it can be successfully treated in more than 90% of cases.
- The bowel cancer screening test is the faecal occult blood test (iFOBT).
- The bowel cancer screening test looks for very small amounts of blood in bowel motions (faeces or poo).

Bowel screening checklist

Yes No Unsure

I have done a bowel cancer screening test (iFOBT) in the past

If yes, my last bowel cancer screening test was in: (year)

Was the result normal?
